
ERANET in Industrial Biotechnology Showcase and 5th Call Launch Event

This event will allow you to hear the outcomes of 10 pan-European projects as well as new funding through the ERANET for industrial biotechnology (<http://www.era-ib.net/>). The projects were funded in 2011 through the ERA-IB's 2nd joint call and ran for 3 years. The project titles are:

1. Novel Production Strategies for Biosurfactants (BioSurf)
2. Metabolic and Enzyme Engineering for the Biotechnological Production of Partially Acetylated Chitosans (ChitoBioEngineering)
3. Genome mining for drug discovery: Activation of silent biosynthetic gene clusters (GenoDrug)
4. Robust fermentation production of tacrolimus and related immunosuppressors: Molecular genetics and metabolic engineering to construct a by-product free superproducer (IMMUNOTEC)
5. Integral Engineering of Acetic Acid Tolerance in Yeast ([INTACT])
6. Multi enzyme systems involved in astin biosynthesis and their use in heterologous astin production (MESIAB)
7. Microreactor technology for continuous enzymatic reactions catalyzed by C-C-bond forming enzymes (MicroTechEnz)
8. Combining efforts in enzyme and process engineering to improve access to multifunctional chiral intermediates (ProAChIm)
9. Development of a process for the utilization both the carbohydrate and the lignin content from lignocellulosic materials of annual plants for the production of valuable products (Products from lignocellulose)
10. Pseudomonas 2.0: industrial biocatalysis using living cells (Pseudomonas 2.0)

In addition we will be launching the 5th ERA-IB joint call for R&D proposals (supported by EuroTransBio). By attending the event you hear what topics will be included in the call and the requirements for submitting an application.

Wednesday 26th February 2014
Radisson Blu Centrum Hotel
Warsaw, Poland

Registration

Places are limited.

To register for your ticket, go to the eventbrite page <http://bit.ly/IBctpr>.

Tickets are free.
